

Embedding Science into Raw Materials

Gauzy's premium Liquid Crystal Films and controllers enable various forms of light to be controlled when applied into, and onto, transparent surfaces.

LC TECHNOLOGY + GLASS = LCG®

dynamic glass that switches from transparent to varying degrees of opaque

Liquid Crystal Products

All Gauzy's films are available in Laminated or RetroFit applications, in raw material rolls, or custom laser cut sheets, with a maximum width of 1.8m.

White / Dark / IR Solar Control / Spectrum Colors / Low Voltage Pixel Custom Patterns (Blinds) / Active & Passive Vizio Projection

Lowest haze / UV Protection / Fast switching times
Ultra low energy consumption / High light transmittance
Easy connection, integration, and operation

Retrofit

Transform existing glass into LCG®

- Works just like laminated film
- Wet adhesive for easy installation
- Scratchproof coating for easy cleaning
- Custom shapes and sizes for polite advertising and projection

Laminated

Support sophisticated projects from the start

- Ultra-low haze with PVB or EVA
- Seamless cutting, laminating and installation process
- Embedded for durability, reliability and extra safety
- Ideal for new buildings and renovation projects
- Easy maintenance and cleaning

Gauzy Controller

Providing the industry's best transparency and opacity performance with unique square waveforms

FLEX

On/Off or Dimming configuration for complete light control in up to 10 m² of LCG®

MultiPlex

Customization for up to 32 outputs, allowing independent control over multiple glass panels or LCG® segments (Pixel Patterned film)

- Small form factor and footprint
- Advanced protection features for better ROI and MTBF
- Ultra-low voltage and power consumption
- Large drive capacity
- WIFI/DMX/RS-484 Compatible

Randomly aligned LC molecules scatter the light, making the glass opaque, ideal for projection, privacy, and drawing.

Electricity from Gauzy controller arranges the LC molecules on demand, making the glass transparent, for an open clean atmosphere.
